SUMMARY

Data Engineer with 4.5 years of experience building scalable batch and streaming data pipelines, data transformation workflows, and large-scale processing solutions using PySpark, Databricks, Python, SQL, Delta Lake, Azure Data Factory, and ADLS Gen2. Hands-on experience with Medallion architecture, ETL/ELT, incremental ingestion, data quality, Spark performance tuning, and production data workflows.

EDUCATION

Savitribai Phule Pune University, Pune

MCA (Database Design, RDBMS, Big Data Analytics, Cloud Computing, Machine Learning).

BCA (Python Programming, Data Structures, Java Programming).

SKILLS

Data Engineering: PySpark, Python, SQL, ETL/ELT, Batch & Streaming, Data Transformation, Data Quality

Cloud & Orchestration: Azure ADLS Gen2, Azure Data Factory, Databricks Workflows/Jobs

Governance & Optimization: Unity Catalog, Partitioning, Spark Performance Tuning, Cluster Optimization

CERTIFICATIONS

Microsoft Certified: Azure Data Engineer Associate (**DP-203**)

Google Cloud Certified: Professional Machine Learning Engineer

NumPy, Pandas and Python for Data Analysis

EXPERIENCE

Infosys: Data Engineer (Jan-2022 – Aug-2026)

Project: Enterprise Data Lakehouse Migration

Technologies: PySpark, Azure Databricks, Python, SQL, ADF, ADLS Gen2, Delta Lake, Unity Catalog

Responsibilities:

- Built scalable batch and streaming ETL/ELT pipelines using PySpark, SQL and Delta Lake for large-volume enterprise data processing.
- Designed Bronze, Silver and Gold Medallion layers, applying cleansing, standardization, business transformations and curated data modeling.
- Developed Azure Data Factory and Databricks workflows for end-to-end ingestion from diverse enterprise sources into ADLS Gen2 and Delta tables.
- Implemented incremental data processing and reliable pipeline patterns to process new/changed records while avoiding unnecessary full loads.
- Optimized Spark jobs through partition strategy, cluster utilization, query tuning and efficient transformations to improve pipeline performance.
- Applied data quality checks for nulls, duplicates, schema consistency and transformation validation before publishing business-ready datasets.
- Used Unity Catalog for centralized governance, access control and schema management across Databricks environments.
- Troubleshoot production pipeline failures, performance issues and data discrepancies, performing RCA and implementing permanent fixes.

PROJECT

Azure Customer Lakehouse | PySpark, Airflow, Delta Lake, Docker ([Project Link](#))-

- Built an end-to-end PySpark ETL pipeline using Bronze-Silver-Gold architecture to ingest, cleanse, deduplicate, and transform customer data into business-ready datasets.
- Implemented Delta Lake, automated data-quality checks, and source-to-target reconciliation to validate data integrity, track inserts/updates/deletes, and maintain audit logs.
- Orchestrated the complete workflow using Apache Airflow and Docker, with dependency management and failure handling across ingestion, transformation, validation, and audit stages.
